

Soji Modern Solar Lantern – INSTRUCTIONS

Congratulations on the purchase of a Soji Modern Solar Lantern!

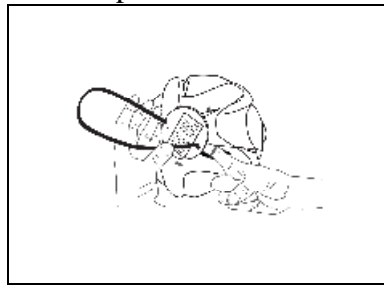

Setting up your Soji Modern lantern is simple and can be accomplished in a few easy steps:

Parts:

1. Rubberized on/off power switch
2. Stainless steel hanging handle
3. Soji Modern- solar lantern
4. 2 LED lights (included)
5. 1 AAA Ni-MH rechargeable battery (included)

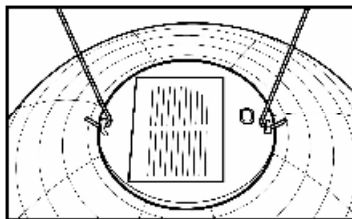

Step 1: On the bottom side of the plastic solar housing compartment (opposite the side containing solar panel) you will see a black rubberized on off sliding switch. You will note the words on and off embossed on the plastic, with an arrow indicating to slide the switch from side to side. To access the switch, hold the Soji Modern lantern so that the solar panel is facing up. Insert one finger into the hole on the side of the lantern closest to the on off switch (diagram a). Slide the switch from the current position “off” into the “on” position. Your Soji Modern solar lantern is now active and ready to collect energy.

Diagram a: Turn power switch from off to on

Step 2: Attach the stainless steel hanging handle by inserting the curved ends of the handle into the molded plastic tabs located on the top of the solar housing compartment (adjacent to the solar panel). The molded tabs are designed with a small hole through which the curved ends of the wire hanging handle fit easily. Attach both sides of wire hanging handle (diagram b). Ensure that the solar panel is facing upward.

A few helpful hints: Each Soji Modern solar lantern is carefully hand-made. For optimum results allow the solar collector to receive between 4-6 hours of direct sunlight daily. See contact information located on back side of instruction set.
