

Soji™ Solar Lantern Instruction Set

Congratulations on the purchase of your Soji™ Solar Lantern! Setting up your Soji™ Solar Lantern is simple and can be accomplished in 4 easy steps.

Parts Included in Package:

- 1.) 1 Nylon Lantern
- 2.) Solar Housing Compartment-attached to nylon lantern
 - a. On/Off Power Switch
 - b. Dual LED Light
 - c. 1 AAA Battery (included)

- 3.) Metal Wire Frame Support

- 4.) Metal Wire Hanging Handle

- 5.) Base unit accessory (stand)

Step One: On the bottom side of the plastic solar housing compartment, slide the power switch from the “Off” position over to the “On” position. This toggle switch will activate the AAA rechargeable battery that is already included inside of the solar housing compartment. Rechargeable batteries are used in conjunction with solar power to store the energy that is collected by the solar panel each day. Leave in the “On” position at all times while placed outside to collect sunlight and emit light at night.

Step Two: While the lantern is still in the flat collapsed position, insert the circular end of the metal wire frame support around the Dual LED bulb. Pull the lantern up to begin to form a round shape. Then attach the “notched” ends of the wire frame support into the wire rings located on the bottom of the nylon lantern. By inserting the metal wire frame support your lantern will “pop up” into a round lantern shape.

Step Three: Attach the wire hanging handle by inserting the curved ends of the handle into the raised tabs located on the top of the plastic solar housing compartment. The molded tabs are designed with a small hole through which the curved end of the wire hanging handle will easily fit. Attach both sides of the wire hanging handle. The solar panel must be facing upwards towards the sun in order to be able to collect sunlight.

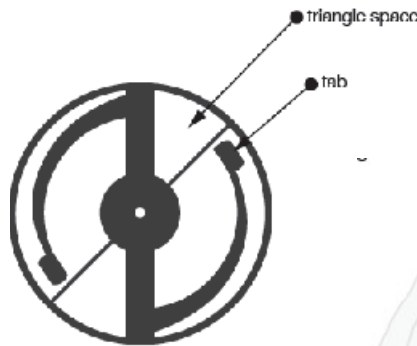

Assembling & Using the Base Unit:

Step Four: In addition to hanging Soji™ Solar Lanterns you can also use it with the included base unit (stand) for a tabletop use, here's how:

The bottom of the base unit is the flat side that will sit flush on a flat surface.

important note:
position base so that wire
attaches to lantern

To attach the base unit line up the empty triangle spaces with the lantern's wire rings

Hook the tabs onto the inside of the lantern by squeezing them one at a time.

*Please note that we recommend putting a stabilizer inside of the Soji™ before attaching the base unit to ensure the product will not move with wind. A Ziploc bag filled with sand, rocks, rice, etc works great.

If you would like to see a detailed video of “How-to Assemble the Base Unit” please visit our website at www.allsopgarden.com

Additional Accessories can purchased for your Soji™ Lanterns, including a shepherd's hook and planting stake. Please view them on our website or by calling our office.
